

BROAN[®]
HEATING AND COOLING SYSTEMS

So comfortable,
yet so efficient.

**UP TO 16 SEER
COMFORT SYSTEMS**

BROAN® EXTRA-HIGH EFFICIENCY UP TO 16 SEER VARIABLE-SPEED, TWO-STAGE UP TO 16 SEER/UP TO 9.0 HSPF VARIABLE-SPEED, TWO-STAGE AIR CONDITIONERS & HEAT PUMPS

Broan two-stage technology allows your air conditioner or heat pump to operate at the most efficient level for total indoor comfort regardless of the outside temperature.

This Broan system includes two main components. The outdoor section is either the air conditioner or the heat pump. The indoor section is a variable-speed air handler or a variable-speed furnace with indoor coil. A warmer climate may utilize a heat pump and an air handler; cooler climates may utilize an air conditioner and a furnace. Your Broan contractor will recommend the comfort system that best fits your needs.

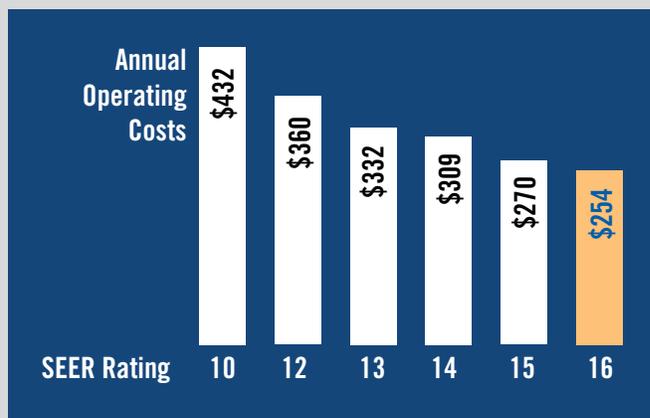

During mild summer days, your system will work at a lower capacity and during hotter days, it will work at full capacity, which reduces the wear and tear on your system. Sound levels are reduced because there are fewer startup and shutdown cycles compared to single-stage units.

By mixing air from floor to ceiling, the variable-speed blower creates more uniform temperatures. Reducing air velocity also allows airborne particles and moisture to be captured at a higher rate, resulting in improved air filtration and reduced humidity levels.

ENERGY EFFICIENCY

Broan air conditioners and heat pumps are rated in Seasonal Energy Efficiency Ratio (SEER). A higher SEER rating makes it easier for your system to perform more efficiently, save more energy and lower your utility bills.

Annual costs based on 36,000 Btu unit, 1,500 cooling load hours and .08/kwh. Actual costs may vary depending on climate conditions, energy rates and patterns of usage.

QUIET COMFORT

Broan air conditioners and heat pumps include additional features for extra quiet-performance, such as swept-wing fan blades, sound reducing bases, and compressor sound blankets.

ADVANCED COIL TECHNOLOGY

All air conditioner models include all-aluminum Micro-Channel coils. These coils feature an innovative design that decreases unit weight and refrigerant requirements, while increasing reliability.

DURABILITY & STYLE

These models feature silicone polyester, urethane-coated galvanized steel with a 950-hour salt spray finish, which protects the unit from corrosion 50% better than other coatings.

ULTRA-INDOOR COMFORT

With its two-stage, variable-speed technology features, this line of air conditioners and heat pumps balance indoor air temperatures better than a standard single-stage system. Its Ultra-Tech Copeland Scroll® Compressor works with the variable-speed indoor section to decrease humidity levels, and reduce hot and cold spots. A programmable thermostat can be installed with this system, automatically adjusting the temperature to match your schedule, increasing energy savings.

ENERGY STAR® certification is awarded to products designed to reduce energy consumption and utility costs. To qualify, split-system air conditioners and heat pumps must have a Seasonal Energy Efficiency Ratio (SEER) rating of 15.0 or higher and an Energy Efficiency Ratio (EER) of 12.5 or higher. Split-system heat pumps are also rated by a Heating Seasonal Performance Factor (HSPF) and must have a rating of 8.5 or higher.

Look for our ecoLogic® seal, your sign of the most energy-efficient, environmentally responsible products Broan offers.

PEACE OF MIND

The Broan series of products offer a 10-year limited warranty on all parts, and a 10-year Quality Pledge at no extra cost (when product is registered as part of a complete Broan system). With our 10-year Quality Pledge, we will replace the entire unit should the compressor fail within the first 10 years (must be installed with a Broan matched indoor coil or air handler).

Ask your Broan heating and cooling contractor or visit us at www.broanhvac.net for warranty details.

Product registration required.

BROAN® VARIABLE-SPEED AIR HANDLERS & INDOOR COILS

This system requires a variable-speed air handler or variable-speed furnace with matched indoor coil (an indoor coil typically sits on top of the furnace). Variable-speed technology significantly improves system efficiency, as well as indoor air quality and sound levels. By mixing air from floor to ceiling, variable-speed technology creates more uniform temperatures. By reducing air velocity, it allows airborne particles and moisture to be captured at a higher rate resulting in improved air filtration and reduced humidity levels.

Select air handler models are available with upgraded corrosion protection through all-aluminum Micro-Channel coils.

If you replace your air conditioner or heat pump, Broan highly recommends that you also replace the existing coil with a matched Broan coil or air handler.* By doing this, you can ensure maximum efficiency and performance of your comfort system.

* A matched indoor coil or air handler is a requirement for coverage under Broan's Quality Pledge.

ENERGY DEFINITIONS

SEER – Seasonal Energy Efficiency Ratio

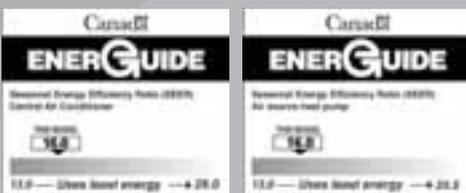

Measures cooling performance on air conditioners, heat pumps and gas/electric packaged products.

HSPF – Heating Seasonal Performance Factor

Measures the average number of Btu of heat delivered for every Watt-hour of electricity used by the heat pump over the heating season.

As ratings increase, so does unit efficiency.

Proper sizing and installation of equipment is critical to achieve optimal performance. Split system air conditioners and heat pumps must be matched with appropriate coil components to meet ENERGY STAR criteria. Ask your contractor for details or visit www.energystar.gov.
